

## Installation

The Samsung PhoneTools are delivered as a zip file. Once you have downloaded the file double click on it to uncompress (unzip) the files.

The default location is C:\Program Files\palm\PhoneToolsPro. But you can put them anywhere you like. Once the files are unzipped, double click on any of the .prc files. This will launch the Install Tool. Then drag and drop the remaining prc files into the main window of the Install tool. Click done, then Hot Sync your phone.

## Configuring Call Totals

To Configure the Call Totals application, run the application from the launcher.

The first time you run Call Totals it will prompt you to Configure your Calling Plan. If you answer no or at any time you wish to reconfigure the plan you may do so by following the steps below.

1. Select Configure Calling Plan from the Option menu of the Call Totals application.
2. Set the starting day of your current billing cycle.

Note: Once you have configured your plan completely, you can “snap shot” all the call data in your history by setting the billing cycle date to the month prior to the first time the phone was used. Remember to use the same day and time as your billing cycle. This will snap all the call data for all the months.

3. Set the starting time of your billing cycle (12:01AM for Sprint);
4. To configure your plan details tap Peak or the Off Peak button.
5. Set the Peak minutes that are included in your plan.
6. Check the “Unlimited” checkbox if your plan has Unlimited Off-Peak **or** Unlimited Weekend calling. If not set the Off-Peak minutes that are included in your plan. If you have no Off-peak calling set the Off Peak Min to 0.
7. From the Select Days pop up list, select “Set all Days”. This will set the cost for the peak and off peak calling times for all the days of the week.

**Please note:**

**You can set the cost individually for each day for both the peak and off peak plan times. The "Set All Days" is simply a short cut to set all the costs of both the peak and off peak time the same for all the days of the week.**

**If you set the \$ amount for any day to 0 the calls made on that day will not be counted or deducted from your peak or off peak minutes.**

8. Tap "(1) Set" to set your Peak minute cost for the minutes in excess of what is included in your plan. **If you set the \$ amount for any day to 0 the calls made on that day will not be counted or deducted from your peak minutes.**
9. If you have not selected Unlimited Off-Peak then Tap "(2) Set" to set your Off Peak minute cost for the minutes in excess of what is included in your plan.
10. Tap "(n) Tap to Set" to set your Peak minute period. This will set the peak time period and cost for all the days of the week. Note: the Off-Peak period is automatically set as the period outside of the Peak period you define.
11. If your plan has Unlimited weekend calling or a different rate structure for Weekends, then use the "Select Days" pop up list to set each day's rate. Select Saturday from the list:
  - a. If you have Unlimited weekend calling then tap the "Peak Time" button and tap "No Time". Repeat step (a) for Sunday.
  - b. Or if your plan has a different cost for Weekends. Then set "\$" to your plan's Saturday rate. Repeat step (b) for Sunday.
12. If you have a plan with ALL the incoming minutes free, then check the "All" Check box.

Note: Incoming calls will be counted and the minutes displayed in the sub totals. The minutes will NOT be debited from your Air time. This allows you to see the actual call count and minutes used and still accurately track your bill.
13. If you have a plan that with the first incoming minute free then check the "First Min " checkbox.

Note: Incoming calls will be counted and the minutes displayed in the all totals but the time will be adjusted to credit the first minute of the call.
14. Tap Done. Depending on your plan the display will show the number of minutes followed by the cost for peak and off peek time. The cost will be the first non-zero valued entered for the days.
15. To configure your plan details for Mobile to Mobile, tap the Mobile 2 Mobile button. If you have Unlimited M2M calling select "Unlimited" check box, If you do not have a M2M Plan set the M2M Min to 0.
16. From the Select Days pop up list, select Set all Days. This will set all the days' Mobile 2 Mobile time and costs for all the days of the week.
17. Tap "(1) Set" to set your Mobile 2 Mobile minute cost for the minutes in excess of what is included in your plan.

18. Tap “(2) Set” to set your Mobile 2 Mobile minute period. This will set the Mobile 2 Mobile time period and cost for all the days of the week.

**Please note: You can set the cost individually for each day for M2M times. The “Set All Days” is simply a short cut to set all the costs of both the M2M time the same for all the days of the week.**

**If you set the \$ amount for any day to 0 the calls made on that day will not be counted or deducted from your M2M Minutes.**

19. Tap Done.

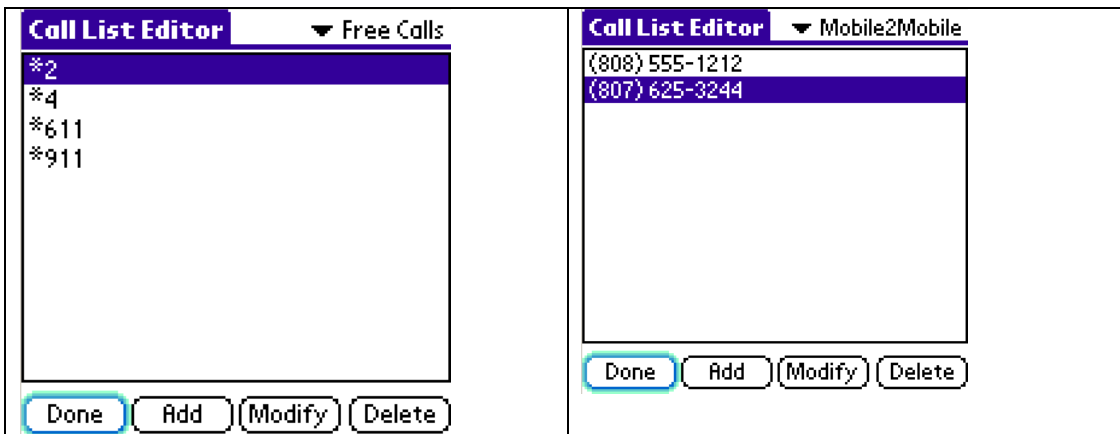

20. Tap Done.

During this billing cycle the minutes used will be displayed. If you exceed your plan’s minutes for peak or the off peak calling periods the cost will be displayed in red in the cost column. At the end of the billing cycle Phone Tools - Call Totals application will automatically record your final total minutes and costs for that billing cycle and begin displaying the new billing cycle’s running totals.

**A word about accuracy:**

The phone tracks the number of seconds used. Because of rounding, this value differs substantially from the actual billed minutes. Phone Tools - Call History Pro has a more accurate method to calculate the actual usage, however the calculation depends on many factors and it can still vary from the actual minutes used.

The Option Menu opens either the Free Call List or the Mobile to Mobile Call List. Which are shown below.

Phone numbers in the Free Call List are not included in the calculations of your phone usage. Phone numbers found in the Mobile to Mobile Call List will not be debited to peak or off peak usage, but instead appear in the Mobile calculation.

If you have a Mobile to Mobile plan you can add numbers to the Mobile to Mobile list with this view, or by using the automatic feature as described in step 20 above. However the best way to add Phone numbers to either the Free or Mobile Call Lists is by using the Call History application as described in section 4 below.

As with all phone numbers entered into the phone, it is recommended that you enter all ten digits. So if you add numbers manually to the Mobile to Mobile list, use the full 10 digit phone number. For example the number (808) 712-5555 in your M2M list will match 712-5555 and (808) 712-5555. However, with 712-5555 in your M2M list it will only match 712-5555 and NOT (808) 712-5555.

## **What's New:**

**Version 1.00 – Release 12/22/04**
